

Department of Computer Science & Engineering and Information Technology

Major Project | Presentation Guidelines

We all understand the significance of developing strong presentation skills. Using the provided template, please prepare your presentation while considering the following points:

- Keep original formatting while preparing your presentation.
- You should not add/remove any slide.
- **Use bullets** to give point-wise descriptions and do not use paragraphs.
- Figures should be **neatly drawn**, clearly mentioning the figure and table name. In addition,
- Clearly mention the % of contribution by individual team members.
- Be precise.

To prepare and deliver an engaging and informative presentation, a few additional suggestions are listed below:

- First, write the outline of your presentation (like introduction, key points, conclusion, etc.).
- Identify the content, code snippets and visuals.
- Logically organize your content to effectively convey the message.
- Explain the code step by step, emphasizing the key details.
- Clearly summarize your points.
- **Speak with enthusiasm.**
- **Speak clearly**, modulate your voice and establish eye contact.
- **Do rehearse** your presentation to become familiar with your content and timing.
- **Avoid reading** directly from slides.
- **Do a self-evaluation after your presentation - learning by doing.**

A few useful resources to deliver a good presentation:
