Major Project | Project Report Guidelines

1. Preparing Major Project Report

First and foremost, you should remember that your project report should tell a story which means that various sections should be arranged logically, one after another, adding up something in a coherent manner. Moreover, it should be written in an incremental manner matching each stage of the project as it is far easier to describe things when they are still fresh in your mind.

It is pertinent to note that the contents of the report should be agreed with your supervisor and the complete project report (initial draft, soft copy), **duly approved by your supervisor**, should be submitted via Google Classroom by **27th September 2025**. The final project report incorporating the feedback, if any, should be submitted during the end-term project evaluation (ETE). During ETE, apart from external examiners, the project report will also be evaluated by designated panel members. Therefore, **you are advised to prepare your project report diligently**. The structure of the project report, along with detailed instructions, is mentioned below:

- a) **Draft Report** | 1st draft should be submitted by 27th September 2025. However, the **strikethrough portion should be ignored for the draft report**.

The draft version should contain the following aspects:

- i. Cover Page
- ii. ~~Certificate~~
- iii. ~~Declaration~~
- iv. ~~Acknowledgement~~
- v. Table of Contents (with page numbers)
- vi. List of Tables
- vii. List of Figures
- viii. List of Abbreviations, Symbols or Nomenclature
- ix. Abstract
- x. Chapter 1: Introduction
- xi. Chapter 2: Literature Survey
- xii. Chapter 3: System Development
- xiii. ~~Chapter 4: Testing~~
- xiv. ~~Chapter 5: Results and Evaluation~~

- xv. Chapter 6: Conclusions and Future Scope
- xvi. List of Publications (include any work communicated or published in a journal/conference)
- xvii. References (provide a comprehensive list of **at least 25 references in IEEE format** duly cited in the project report)
- xviii. Appendix (include additional material to support your chapters, like project plan, code snippets, additional data, glossary of terms, user manual, business plan (for entrepreneurship project), plagiarism certificate, etc. **Plagiarism certificate should be the last page of your project report.**

b) Chapters' Organization

The chapters should include the following sections:

S. No.	Chapter	Sections
1.	Chapter 1: Introduction	1.1 Introduction 1.2 Problem Statement 1.3 Objectives 1.4 Significance and Motivation of the Project Work 1.5 Organization of Project Report
2.	Chapter 2: Literature Survey	The literature survey should include the existing information available in standard books, journals, popular websites, top organizations' technical/white papers, etc., with a clear emphasis on the recent five years' work. 2.1 Overview of Relevant Literature 2.2 Key Gaps in the Literature
3.	Chapter 3: System Development	3.1 Requirements and Analysis 3.2 Project Design and Architecture 3.3 Data Preparation 3.4 Implementation (include code snippets, algorithms, tools and techniques, etc.) 3.5 Key Challenges (discuss the challenges faced during the development process and how these are addressed)
4.	Chapter 4: Testing	4.1 Testing Strategy (discuss the testing strategy/tools used in the project) 4.2 Test Cases and Outcomes

5.	Chapter 5: Results and Evaluation	4.3 Results (presentation of findings, interpretation of the results, etc.) 4.4 Comparison with Existing Solutions (if applicable)
6.	Chapter 6: Conclusions and Future Scope	5.1 Conclusion (summarize key findings, limitations and contributions to the field) 5.2 Future Scope

1. Formatting Guidelines

- Use consistent naming conventions.
- Use the given Cover Page and Declaration templates.
- Fonts
 - Chapter Title (Times New Roman, Bold, Capitalize each word, Size: 20)
 - Section Heading (Times New Roman, Bold, Capitalize each word, Size: 14)
 - Sub-Sections Heading (Times New Roman, Bold, Capitalize each word, Size: 12)
 - Normal Text (Times New Roman, Size: 12)
- Line Spacing
 - Insert **1.5 line spacing** throughout the document. This setting should be applied as the default.
 - Press Enter** to separate different sections or sub-sections.
 - Set 10-point spacing after each paragraph** in MS Word. Ensure that the option - *Don't add a space between paragraphs of the same style*, is unchecked to maintain consistent spacing. Set it as the default choice for the entire document.
- Text Alignment: Justify
- Page Numbers
 - Insert the page number at the extreme right bottom of the page.
 - Starting with the Certificate to Abstract, the page number should be mentioned in Roman letters like (i), (ii), (iii), (iv), and so on. Remember Cover Page does not have any page number.
 - Starting with Chapter 1, the page number should be mentioned like 1, 2, 3, 4, and so on.
- Figures and Tables
 - All figures and tables must be **centrally aligned**.
 - Figures and tables should be numbered as chapter-wise, e.g., Figure 1.1, Figure 1.2, Table 1.1, and so on.
 - The caption for a figure should be placed **below** the figure, including the figure number, and must be centrally aligned.

- iv. The caption for a table should be placed **above** the table, including the table number, and must be centrally aligned.
- v. Provide explanatory text, if required.
- vi. **Spacing**
 - Press Enter before and after a figure or table to create proper spacing.
 - Maintain a 10-point space between the figure or table and its caption to ensure clear separation and consistent formatting.
- h) Mathematical Equations
 - i. Use Equation Editor to insert mathematical equations.
 - ii. Clearly define the symbols and notations used in your equations.
 - iii. Accompany explanatory text, if required.

2. Best Practices

- a) Managing your time is very important to meet your deadlines. Don't leave anything (like printing) till the last day.
- b) Strong recommendation to use Microsoft Word or Apache OpenOffice Writer Style feature to separate the concerns about formatting the contents.
- c) Keep different chapters in different files so that any team member can work independently on a chapter. Even better, you can use Google Docs to collaborate as a team in real time.
- d) Use consistent naming conventions.
- e) Upload the project details into the GitHub Repository.
